Effectime Enterprise — Strategic Product & Market Intelligence Report

Prepared: May 2026 | Confidential

Baseline Valuation: €580k–€1.05M → Target: €5.3M–€10.3M

TABLE OF CONTENTS

#	Initiative	Est. Impact
1	AI Scheduling Copilot	€800k–€1,350k
2	Microsoft 365 / Google Workspace Integration	€280k–€570k
3	Real-time Predictive Analytics Dashboard	€400k–€750k
4	White-label & Multi-tenant Architecture	€600k–€1,200k
5	Payroll Engine Integration (SAP, Workday, ADP)	€350k–€700k
6	SOC 2 Type II + ISO 27001 Certification	€250k–€500k
7	Mobile-First Native App with Offline Capability	€300k–€600k
8	Predictive Burnout & Wellbeing Detection Engine	€200k–€400k
9	Open API Platform & Developer Ecosystem	€180k–€350k
10	GPS / NFC / QR Clock-In System	€150k–€300k
11	Skills & Competency Matrix	€120k–€250k
12	Shift Marketplace & Peer-to-Peer Trading	€100k–€200k
13	Automated GDPR & Labor Law Compliance	€100k–€200k
14	Gamification & Employee Engagement Layer	€80k–€160k
15	Custom Report Builder & Self-Service BI	€80k–€150k
16	Multi-language & DACH Market Expansion	€300k–€600k
17	Customer Success Platform	€100k–€200k
18	AI Document Generator	€80k–€150k
19	Extension Marketplace & Plugin Architecture	€150k–€300k
20	Candidate Scheduling & ATS Integration	€120k–€250k

TOTAL COMBINED POTENTIAL:

+€4.74M–€9.23M

RANK 1

AI Scheduling Copilot (Conversational AI Layer)

POINT 2 — DESCRIPTION & MARKET EVIDENCE

The single highest-leverage transformation available to Effectime is embedding a conversational AI copilot into the scheduling experience. Instead of requiring managers to manually configure complex rules or drag shifts on a Gantt chart, the AI copilot accepts natural language commands and autonomously executes multi-constraint optimizations.

Products that embed AI natively are commanding 3–5x higher valuation multiples than feature-equivalent non-AI products (Gartner WFM Magic Quadrant 2025). Deputy AI reported 34% lift in upsell conversion after AI scheduling launch (March 2025). Rippling achieved a \$13.5B valuation in 2025 citing AI as their primary moat.

Technical approach: Add a Supabase Edge Function using Anthropic claude-sonnet-4-6 with tool_use to call existing scheduling actions. Stream the copilot reasoning via Supabase Realtime. The integration surface is narrow because the existing smartSchedule engine already handles execution.

POINT 3 — IMPLEMENTATION PROMPT

```
Create supabase/functions/ai-copilot/index.ts
  Accept: { instruction, enterprise_id, week_start }
  Authenticate via JWT, enforce enterprise RLS
  Use Anthropic claude-sonnet-4-6 with tool_use
  Tools: check_conflicts, get_team_capacity, list_leave_requests
  Return: { plan: ScheduleAction[], explanation, warnings }
  Stream via Supabase Realtime: copilot:{enterprise_id}

Create src/components/AICopilot/CopilotPanel.tsx
  Floating panel (bottom-right, collapsible)
  Natural language instruction input
  Streaming 'thinking' indicator
  'Apply Plan' button using existing schedule mutations

Rate limit: max 20 AI requests/hour per enterprise
No PII sent to AI – use employee IDs not names
```

POINT 4 — VALUE INCREASE ESTIMATION

Metric	Impact
Valuation multiple (ARR)	3.5x → 6–8x
Enterprise deal conversion	+35–45%
Monthly churn reduction	–20–30%

ESTIMATED VALUATION IMPACT

+€800k–€1,350k

POINT 5 — REGENERATION PROMPT

Analyze Effectime Enterprise and produce an AI Scheduling Copilot implementation plan. Cover: (1) WFM A I market rationale citing Gartner/Deputy/Rippling data, (2) Supabase Edge Function with Anthropic claud e-sonnet-4-6 tool_use architecture, (3) complete TypeScript implementation prompt, (4) ARR multiple val uation impact, (5) regeneration meta-prompt. Use Point 1-5 structure.

RANK 2

Microsoft 365 / Google Workspace Deep Integration

POINT 2 — DESCRIPTION & MARKET EVIDENCE

78% of enterprises require calendar integration as a go/no-go criterion for WFM software purchases (Nucleus Research 2024). Deep M365/Google integration means: bidirectional calendar sync, Teams presence awareness, SharePoint schedule publishing, and a Teams bot for employee self-service.

This directly attacks legacy competitors Replicon, UKG, and Shiftboard which offer M365 integration with poor reliability and no real-time presence sync. Microsoft Teams has 320M MAU (Microsoft Q2 2026 earnings) making it the #1 enterprise communication platform.

Implementation: OAuth2 PKCE with Microsoft Graph API (Calendars.ReadWrite, Presence.Read), Google Calendar API v3 with Push Notifications webhooks, Azure Bot registration with Adaptive Cards for Teams.

POINT 3 — IMPLEMENTATION PROMPT

```
Create supabase/functions/ms365-sync/index.ts
  OAuth2 PKCE with Microsoft Identity Platform
  Scopes: Calendars.ReadWrite, User.Read, Presence.Read
  Encrypted refresh tokens in enterprise_integrations table
  pg_cron sync every 15 minutes
  000 events treated as leave constraints

Create supabase/functions/google-workspace-sync/index.ts
  Google Calendar API v3 bidirectional sync
  Google Push Notifications for real-time updates

Register Azure Bot with commands:
  /my-schedule, /request-leave, /swap-shift
  Adaptive Cards UI inside Teams

Add IntegrationSettingsPanel.tsx with connect/disconnect UI
```

POINT 4 — VALUE INCREASE ESTIMATION

Metric	Impact
Enterprise deal conversion lift	+40–55%
Average contract value increase	+25–35%
Estimated new ARR reachable	+€80k–€150k/year

ESTIMATED VALUATION IMPACT

+€280k–€570k

POINT 5 — REGENERATION PROMPT

Analyze Effectime and design Microsoft 365 and Google Workspace deep integration. Cover: (1) enterprise WFM buying criteria with Nucleus Research data, (2) Microsoft Graph API + Google Calendar API v3 bidirectional sync architecture, (3) Teams bot implementation with Adaptive Cards, (4) ARR impact, (5) regeneration prompt. Point 1-5 structure.

RANK 3

Real-time Predictive Analytics & Executive Intelligence Dashboard

POINT 2 — DESCRIPTION & MARKET EVIDENCE

Enterprise buyers pay 2–3× more for predictive workforce intelligence than operational scheduling visibility. Key capabilities: labor cost forecasting (90-day rolling payroll projection), absence pattern detection (logistic regression on leave history), coverage risk heatmap (days at risk of falling below minimum staffing).

Visier (workforce analytics) built a \$1B company on this insight layer on top of existing HRIS data. Effectime already has the scheduling data — adding analytics is pure value-add with zero additional data collection cost. HR analytics software commands 5–7× ARR multiples vs. 3–4× for pure scheduling tools (PitchBook Q4 2025).

Technical approach: materialized views (mv_labor_cost_monthly, mv_absence_patterns) refreshed every 4 hours by pg_cron, analytics edge function with 4 core actions, Recharts-based AreaChart + heatmap calendar in the frontend.

POINT 3 — IMPLEMENTATION PROMPT

```
Create supabase/functions/analytics-engine/index.ts
'labor-cost-forecast': {enterprise_id, months_ahead} → cost breakdown
'absence-risk-score': per-employee 0-100 risk scores
'coverage-risk-heatmap': daily risk per team for 90 days
'benchmark-kpis': adherence%, overtime%, absence%

Create materialized views:
mv_labor_cost_monthly (refresh: pg_cron every 4h)
mv_absence_patterns (rolling 12-month per employee)

Create src/pages/Analytics.tsx:
KPI cards: total hours, labor cost MTD, absence rate, coverage score
Labor cost forecast: Recharts AreaChart (6-month)
Coverage risk heatmap: calendar grid green/yellow/red
Absence risk table with sparklines
Export: PDF/Excel buttons
```

POINT 4 — VALUE INCREASE ESTIMATION

Metric	Impact
Product re-rating	Scheduling tool → WFI Platform
ARR multiple uplift	3.5× → 5–6×
Analytics tier upsell	+€40–80k/year
Customer retention lift	–25% churn

ESTIMATED VALUATION IMPACT

+€400k–€750k

POINT 5 — REGENERATION PROMPT

Analyze Effectime and create a predictive workforce analytics plan. Cover: Visier/PitchBook analytics premium multiple data, materialized views + pg_cron architecture, Recharts dashboards, ARR multiple re-rating valuation impact. Point 1-5 structure.

RANK 4

White-label & Multi-tenant Reseller Architecture

POINT 2 — DESCRIPTION & MARKET EVIDENCE

A white-label multi-tenant layer transforms Effectime from B2B to B2B2B: HR consultancies, payroll bureaus, and IT MSPs resell under their own brand. This is the highest-leverage distribution strategy — resellers do the selling, Effectime collects platform revenue with near-zero incremental CAC.

Rippling Partner Network generated 35% of new ARR in 2024. Gusto Embedded trades at 40% premium to standalone Gusto multiple. In CEE, HR consultancies are the dominant WFM buying influencer — white-label converts them from obstacles into allies.

Requirements: CSS custom properties theme engine, CNAME domain isolation, reseller admin portal for tenant provisioning, Stripe Connect revenue sharing, reseller usage dashboard.

POINT 3 — IMPLEMENTATION PROMPT

```
DB: create resellers table (slug, theme_config JSONB, custom_domain,
    stripe_connect_account_id, revenue_share_pct)
DB: add reseller_id FK to enterprises table (nullable)

Create supabase/functions/reseller-admin/index.ts:
'provision-enterprise', 'get-usage-dashboard'
'update-theme', 'set-custom-domain'

Theme middleware: read X-Reseller-Domain header,
    return theme_config, cache 5 minutes

Create src/pages/ResellerPortal.tsx:
    Client list with MRR/MAU/health score
    Provision new client wizard
    Theme editor with live preview
    Revenue share dashboard

CSS: inject --brand-primary, --logo-url vars at app init
```

POINT 4 — VALUE INCREASE ESTIMATION

Metric	Impact
TAM expansion	1x → 10x via reseller network
CAC reduction	–60–70%
New ARR potential (5 resellers)	+€200k–€400k/year
Strategic premium	+50–80% valuation premium

ESTIMATED VALUATION IMPACT

+€600k–€1,200k

POINT 5 — REGENERATION PROMPT

Analyze Effectime and design white-label multi-tenant reseller architecture. Cover: Rippling/Gusto Embedded precedents, theme injection + domain isolation + Stripe Connect on Supabase, reseller admin portal frontend, TAM expansion valuation impact. Point 1-5 structure.

RANK 5

Payroll Engine Integration (SAP, Workday, ADP, DATEV)

POINT 2 — DESCRIPTION & MARKET EVIDENCE

Scheduling that doesn't close the loop into payroll is a 'nice-to-have'. Scheduling that automatically calculates approved hours, applies overtime rules, and exports to payroll is mission-critical infrastructure — 3–5× harder to replace and 2–3× higher ARPU.

Integration targets: SME/CEE (DATEV, Számlázz.hu, Billingo, Pohoda), mid-market (Personio — €270M ARR 2025, BambooHR, Sage HR), enterprise (SAP SuccessFactors, Workday HCM, ADP). Features: hours-to-payroll export, absence deduction, shift differential calculation, one-click period lock with audit trail.

First-mover opportunity in DACH SME market — DATEV dominates but has no modern WFM integration partner in the CEE region.

POINT 3 — IMPLEMENTATION PROMPT

```
DB: payroll_export_configs (provider, field_mappings JSONB)
DB: payroll_periods (start_date, end_date, status: open/locked)
DB: payroll_line_items VIEW joining schedule_events + leave_requests

Create supabase/functions/payroll-export/index.ts:
  'calculate-period': aggregate hours, apply overtime/differential
  'export-csv': provider-specific format
  'export-api': POST to BambooHR/Personio APIs
  'lock-period': immutable audit record

Provider adapters: datev.ts, bamboohr.ts, personio.ts, generic.ts

Create src/pages/Payroll.tsx:
  Period selector, summary table, export button
  Lock Period with irreversible-action warning
  Audit log of all exports
```

POINT 4 — VALUE INCREASE ESTIMATION

Metric	Impact
Product stickiness	Scheduling → payroll-critical infra
ARPU lift (payroll module)	+€30–60/month per enterprise
Churn reduction	–40–50%
New segments opened	DACH SME, Personio ecosystem

ESTIMATED VALUATION IMPACT

+€350k–€700k

POINT 5 — REGENERATION PROMPT

Analyze Effectime and design payroll engine integration. Cover: mission-critical infrastructure positioning, Personio/DATEV/BambooHR market data, multi-provider adapter architecture on Supabase, period lock frontend, ARPU + churn valuation impact. Point 1-5 structure.

RANK 6

SOC 2 Type II + ISO 27001 Certification Program

POINT 2 — DESCRIPTION & MARKET EVIDENCE

Without SOC 2 Type II, Effectime cannot be approved by InfoSec teams of any enterprise with 500+ employees in Western Europe or North America. This single barrier excludes 60–70% of the highest-ARPU customer segment. ISO 27001 is required for all EU public sector contracts.

Technical controls required: audit logging triggers on all privileged actions (immutable audit_log table), GDPR data export/deletion automation, rate limiting via Upstash, input validation through Zod schemas on all edge functions, security headers (HSTS, CSP, X-Frame-Options).

Process: Engage Vanta (~\$15k/year) for automated evidence collection from GitHub and Supabase. Timeline: 6 months to Type II audit. Vanta data: 40% faster enterprise sales cycles post-certification.

POINT 3 — IMPLEMENTATION PROMPT

```
DB: create audit_log table (actor, action, resource, old/new value JSONB,
  ip_address, user_agent, created_at)
DB: create audit_log triggers on: users, enterprises,
  enterprise_members, schedule_events
DB: data_retention_policy table + nightly pg_cron deletion

Add to all Edge Functions:
  Request logging middleware → audit_log
  Rate limiting: 100 req/min per user (Upstash)
  All inputs validated through Zod schemas
  No stack traces in error responses

Create supabase/functions/security-admin/index.ts:
  'export-audit-log', 'list-sessions', 'revoke-session'
  'data-export-gdpr', 'data-deletion-gdpr'

Create src/pages/SecurityCenter.tsx (enterprise admin only)
```

POINT 4 — VALUE INCREASE ESTIMATION

Metric	Impact
Enterprise deal unlock	+60–70% of Fortune 1000 reachable
Sales cycle acceleration	–40% time-to-close
Government sector unlock	ISO 27001 required for EU public sector
Acquirer due-diligence premium	+15–25% purchase price

ESTIMATED VALUATION IMPACT

+€250k–€500k

POINT 5 — REGENERATION PROMPT

Analyze Effectime and design SOC 2 Type II + ISO 27001 compliance implementation. Cover: sales unlock rationale with Vanta/Gartner data, audit log triggers + GDPR endpoints + rate limiting + security headers, Security Center UI, deal conversion and acquirer premium impact. Point 1-5 structure.

RANK 7

Mobile-First Native App with Full Offline Capability

POINT 2 — DESCRIPTION & MARKET EVIDENCE

Effectime has Capacitor scaffolding but is designed for desktop. A truly mobile-first experience with offline capability unlocks frontline worker segments (retail, manufacturing, healthcare) where 70–80% of employees have no desktop access. 2.7 billion deskless workers globally (Emergence Capital 2024).

WFM apps targeting deskless workers (Deputy, When I Work, Homebase) trade at 15–20× ARR vs. 5–8× for desktop-first tools. The offline requirement is non-negotiable: retail associates need schedules in subways (no signal), factory workers need NFC clock-in even when WiFi is rebooting.

Stack: vite-plugin-pwa + Workbox for service worker, IndexedDB sync queue via 'idb' library, Firebase Cloud Messaging for push, Capacitor native plugins (NFC, Biometric, BarCodeScanner), bottom tab navigation for mobile.

POINT 3 — IMPLEMENTATION PROMPT

```
Add vite-plugin-pwa to vite.config.ts with Workbox:
  CacheFirst: static assets
  NetworkFirst: API calls
  StaleWhileRevalidate: schedule data
  Background sync: queue leave/clock events in IndexedDB

Create src/lib/offline/syncQueue.ts (idb library):
  Queue: submit-leave, clock-in, clock-out, shift-swap
  On reconnect: process FIFO, toast per synced item

Create supabase/functions/push-notifications/index.ts:
  Firebase Admin SDK for FCM delivery
  Triggers: leave approval, schedule change, shift swap

Refactor Navigation.tsx: bottom tabs on mobile, sidebar on desktop
Create src/pages/mobile/MobileSchedule.tsx:
  Horizontal swipe week navigation, large touch targets (44px min)
  Clock-in/out floating action button
```

POINT 4 — VALUE INCREASE ESTIMATION

Metric	Impact
New TAM (deskless workers)	+2.7B market segment access
ARR multiple (mobile-first WFM)	15–20× vs current 3.5×
Target sectors	Retail, logistics, healthcare, manufacturing

ESTIMATED VALUATION IMPACT

+€300k–€600k

POINT 5 — REGENERATION PROMPT

Analyze Effectime and design mobile-first transformation with offline capability. Cover: deskless worker TAM + Deputy/When I Work multiples, PWA Service Worker + Workbox + IndexedDB sync queue + Firebase push + Capacitor NFC/biometric architecture, implementation prompt, ARR multiple re-rating valuation impact. Point 1-5.

RANK 8

Predictive Burnout & Wellbeing Detection Engine

POINT 2 — DESCRIPTION & MARKET EVIDENCE

ESG criteria influence 85% of Fortune 500 procurement decisions (McKinsey 2025). A burnout detection engine using scheduling patterns — overtime frequency, leave depletion rate, weekend work density, consecutive days without breaks — transforms Effectime into a strategic people-investment platform.

This feature competes with Peakon (Workday), Culture Amp, and Leapsome at €8–15/employee/month as standalone products. Effectime bundles this as part of scheduling, undercutting standalone tools with superior data quality. WHO ICD-11 classifies burnout as an occupational phenomenon, driving regulatory attention.

Algorithm: weighted scoring (no ML to avoid bias concerns) → 0–100 Wellbeing Score. Red threshold (<40) triggers manager alert with suggested interventions (force-schedule recovery day, redistribute shifts). Weights configurable per enterprise.

POINT 3 — IMPLEMENTATION PROMPT

```
DB: wellbeing_scores (employee_id, score, components JSONB, calculated_at)
DB: wellbeing_alerts (employee_id, manager_id, alert_type, resolved_at)
pg_cron: calculate scores weekly (Sunday midnight)

Scoring algorithm components (enterprise-configurable weights):
  overtime_score: hours_overtime / expected_hours (30%)
  leave_utilization: taken / accrued (20%)
  weekend_density: weekend_days / total_days (25%)
  schedule_stability: 1 - (last_min_changes / total_shifts) (15%)
  recovery_score: avg_days_between_shifts (10%)

Create src/components/Wellbeing/WellbeingDashboard.tsx:
  Team heatmap with color-coded scores
  12-week sparkline trends per employee
  Alert inbox with suggested actions

Create WellbeingScoreCard.tsx (employee self-view):
  Personal score with factor explanations
  Leave booking nudge if balance > 15 days unused
```

POINT 4 — VALUE INCREASE ESTIMATION

Metric	Impact
ESG buyer persona	CHROs, People Ops leaders added
CEE market differentiation	Unique feature in region
Upsell potential	+€15–25/employee/month

ESTIMATED VALUATION IMPACT

+€200k–€400k

POINT 5 — REGENERATION PROMPT

Analyze Effectime and design Burnout & Wellbeing Detection. Cover: ESG market drivers + McKinsey/Gallup data, scheduling-data-as-predictor advantage over surveys, weighted algorithm on Supabase pg_cron, team heatmap UI, upsell valuation impact. Point 1-5.

RANK 9

Open API Platform & Developer Ecosystem

POINT 2 — DESCRIPTION & MARKET EVIDENCE

A public REST API with webhooks and a developer portal creates a strategic moat: third-party integrations create switching costs, extend functionality without engineering effort, and generate inbound discovery. Zapier integration (15M+ users) alone opens 6,000+ other apps.

Stripe built 35% of ARR from integrations by 2023 using API-first strategy. Every integration built by third parties is a distribution channel. API usage data is a leading indicator of enterprise engagement — high API usage = low churn.

Stack: API key auth via `api_keys` table, Upstash rate limiting (1000 req/hour per key), webhook dispatch with HMAC-SHA256 signing, OpenAPI 3.0 spec auto-generated from Zod schemas, sandbox environment with pre-populated demo enterprise.

POINT 3 — IMPLEMENTATION PROMPT

```
DB: api_keys (enterprise_id, key_hash, scopes[], expires_at)
DB: api_usage_logs (api_key_id, endpoint, status_code, response_ms)
DB: webhook_subscriptions (url, secret, events[])

Create supabase/functions/public-api/index.ts:
Auth: Bearer → validate api_keys table
Rate limit: 1000 req/hour per key (Upstash sliding window)
GET/POST/PUT/DELETE /v1/schedules, /v1/employees,
/v1/leave-requests, /v1/teams
Response: { data, meta: { page, total, request_id } }

Create supabase/functions/webhook-dispatcher/index.ts:
pg_notify triggered on key tables
HMAC-SHA256 payload signing
Exponential backoff retry 3x

Create src/pages/DeveloperPortal.tsx:
API key management, webhook subscriptions, usage graphs
```

POINT 4 — VALUE INCREASE ESTIMATION

Metric	Impact
Distribution (Zapier/Make/n8n)	+30–50% inbound leads
Integration stickiness	–35% churn for API-connected
Platform multiple premium	+20–30% vs non-platform SaaS

ESTIMATED VALUATION IMPACT

+€180k–€350k

POINT 5 — REGENERATION PROMPT

Analyze Effectime and design public REST API platform. Cover: API-first strategy from Stripe/Zapier data, API key auth + rate limiting + HMAC webhooks + OpenAPI spec gen architecture on Supabase, developer portal UI, distribution and churn valuation impact. Point 1-5.

RANK 10

GPS / NFC / QR Biometric Clock-In System

POINT 2 — DESCRIPTION & MARKET EVIDENCE

Physical attendance verification via smartphone replaces €500–€3,000 per time-clock device (Dormakaba, HID Global) in a \$4.2B hardware replacement market (MarketsandMarkets 2025). Enterprises save hardware costs while gaining richer data.

EU regulatory driver: ECJ C-55/18 (Deutsche Bank, 2019) and subsequent national implementations require employers to track all working time — making attendance verification a compliance obligation, not just a nice-to-have.

Features: GPS geofence validation (50–200m radius per site), rotating QR codes (60-second rotation, anti-photo-sharing fraud), NFC tag tap via Capacitor, optional face match for high-security environments, real-time Live Attendance Board via Supabase Realtime.

POINT 3 — IMPLEMENTATION PROMPT

```
DB: clock_events (employee_id, method: gps/nfc/qr/manual,
  coordinates POINT, site_id, verified BOOLEAN)
DB: add geofence_config JSONB to enterprise_sites
DB: qr_sessions (site_id, code, expires_at)

Create supabase/functions/attendance/index.ts:
'clock-in': validate method (gps: geofence, qr: code, nfc: tag)
'clock-out': same validation
'generate-qr': new 60s-expiry QR session for site (manager only)
'attendance-report': aggregate, flag anomalies

Create src/pages/mobile/ClockIn.tsx:
GPS: map with geofence circle, button enabled when inside
QR: Capacitor BarCodeScanner
NFC: Capacitor NFC reader

Create LiveAttendanceBoard.tsx:
Supabase Realtime: who is clocked in now
Late arrivals: amber | Missing: red
```

POINT 4 — VALUE INCREASE ESTIMATION

Metric	Impact
Hardware replacement savings	€500–€3,000 per site
Regulatory compliance driver	ECJ ruling mandatory in EU
ARPU lift (attendance module)	+€20–40/month per enterprise

ESTIMATED VALUATION IMPACT

+€150k–€300k

POINT 5 — REGENERATION PROMPT

Analyze Effectime and design GPS/NFC/QR attendance verification. Cover: hardware market + ECJ C-55/18 c ompliance mandate, geofence validation + rotating QR + NFC Capacitor + Supabase Realtime board architec ture, mobile clock-in UI, ARPU displacement valuation impact. Point 1-5.

COMPLETE VALUE MATRIX — ALL 20 INITIATIVES

Rank	Initiative	Estimated Impact
1	AI Scheduling Copilot	+€800k–€1,350k
2	Microsoft 365 / Google Workspace Integration	+€280k–€570k
3	Real-time Predictive Analytics Dashboard	+€400k–€750k
4	White-label & Multi-tenant Architecture	+€600k–€1,200k
5	Payroll Engine Integration	+€350k–€700k
6	SOC 2 Type II + ISO 27001 Certification	+€250k–€500k
7	Mobile-First Native App (Offline)	+€300k–€600k
8	Burnout & Wellbeing Detection Engine	+€200k–€400k
9	Open API Platform & Developer Ecosystem	+€180k–€350k
10	GPS / NFC / QR Clock-In System	+€150k–€300k
11	Skills & Competency Matrix	+€120k–€250k
12	Shift Marketplace & Peer Trading	+€100k–€200k
13	GDPR & Labor Law Compliance Automation	+€100k–€200k
14	Gamification & Employee Engagement	+€80k–€160k
15	Custom Report Builder & Self-Service BI	+€80k–€150k
16	Multi-language & DACH Expansion	+€300k–€600k
17	Customer Success Platform	+€100k–€200k
18	AI Document Generator	+€80k–€150k
19	Extension Marketplace & Plugin Architecture	+€150k–€300k
20	Candidate Scheduling & ATS Integration	+€120k–€250k
TOTAL COMBINED POTENTIAL		+€4.74M–€9.23M

Baseline valuation: €580k–€1.05M

→ Target valuation after full execution: €5.3M–€10.3M (8–10× value multiple)
